

Statement of Purpose

I am currently in my third year pursuing my B.Tech. in Computer Science and Artificial Intelligence. I have always had an avid interest in computer science fundamentals and systems. My academic projects in Data Structures, Design and Analysis of Algorithms, Database Management Systems, and Software Engineering have helped me improve my analytical and problem-solving skills.

I have also tried to apply my theoretical knowledge to practical projects. My current project is “LifeLink – Every Second Counts.” It is a web-based application aiming to simplify the process of medical fund assistance by connecting patients, hospitals, and NGOs. I have attempted to work on the backend logic and authentication mechanisms, which have helped me improve my understanding of software systems.

I am particularly interested in optimizing algorithms and developing efficient software systems. I believe this opportunity at IIT Madras would provide me with research exposure and improve my technical skills and problem-solving skills with the guidance and supervision of the faculty.
