

SUKSHMI PANDEY

8810939273 | sukshmipandey76@gmail.com

EDUCATION

Banasthali Vidyapith, Rajasthan

Bachelor of Technology in Computer Science – Artificial Intelligence

July 2023 – June 2027

CGPA : 8.5

Canossa Convent Ayodhya, UP

Class 12 (UP Board)

Apr 2022 – May 2023

Percentage: 78.3%

Canossa Convent Ayodhya, UP

Class 10 (CBSE)

Apr 2020 – May 2021

Percentage: 87.7%

TECHNICAL SKILLS

Languages/Frameworks: Python, C, SQL, HTML, CSS, C++, Java, JavaScript, Node, React **Software Tools:** GitHub, VS Code, Canva, MATLAB

Libraries: TensorFlow, OpenCV

PROJECTS

AI-based Network Intrusion Detection System | Python, TensorFlow, Scikit-learn

- Developed an **AI-powered intrusion detection system** to detect abnormal network traffic patterns.
- Trained machine learning models on cybersecurity datasets to identify potential threats.
- Implemented anomaly detection techniques for **real-time network security monitoring**.
- Evaluated system performance using standard cybersecurity evaluation metrics.

Smart Geo-Data Visualization Platform | Python, JavaScript, Leaflet, AWS

- Developed a **WebGIS application** to visualize geographic datasets on interactive maps.
- Integrated geospatial data layers with dynamic map rendering using **Leaflet.js and GeoJSON**.
- Deployed the application on **AWS cloud infrastructure** for scalable access and hosting.
- Implemented real-time filtering and location-based analytics for improved geospatial insights.

LifeLink – Healthcare Support & Emergency Platform | MERN Stack, Razorpay API

- Developed **LifeLink**, a healthcare support platform aimed at improving coordination between patients, families, and hospitals.
- Designed backend APIs and database schemas to manage **hospital onboarding, tribute entries, and healthcare-related data securely**.
- Integrated **secure digital payment functionality using Razorpay API** for processing service payments.
- Implemented a user-friendly interface to support **real-time interaction and efficient healthcare service management**.

AI-Driven Smart Scheduling System for Sugarcane Supply Management | Python, Machine Learning, Data Analytics

- Proposed an **AI-based scheduling and prediction system** to reduce congestion and long waiting times at sugarcane mills during harvesting seasons.

- Designed machine learning models to **predict farmer arrival patterns and sugarcane supply volume** using historical delivery data and environmental factors.
- Developed an **intelligent queue optimization algorithm** that recommends optimal delivery slots for farmers, minimizing waiting time and mill overload.
- Applied **predictive analytics and data-driven decision making** to improve coordination between farmers and sugar mills.
- The system aims to enhance **agricultural supply chain efficiency, reduce transportation delays, and improve crop processing management.**

CERTIFICATIONS

Goldman Sachs – Software Engineering on Forage
Deloitte Australia – Data Analytics on Forage AWS
APAC – Solutions Architecture

Python Programming – Banasthali Vidyapith
Java – Knowledge Gate
Smart India Hackathon

ACHIEVEMENTS

- Solved 100+ Algorithm based Problems across various globally recognized online coding platforms.
- Completed various courses online such as web development, python, by IBM and gained expertise in various fields and also the certificates.
- Consistently maintaining a good GPA and a top performer in maths.
- Gained hands-on experience through online projects.
